Loglift Jonsered

A Grapple for Every Need

The LOGLIFT JONSERED range of grapples features several alternatives for handling timber and recycling materials.

The timber grapples are designed for demanding work. They penetrate log piles, straighten logs and load them effortlessly. A practical design provides the light-weight grapples with durability and power, while the single-cylinder design with few moving parts guarantees a long and carefree service life. With the yellow LOGLIFT JONSERED timber grapples you can load quickly and reliably year after year.

LOGLIFT JONSERED lasts

These grapples are designed for hard wear and tear, taking the special requirements of handling demolition waste and scrap into consideration. Due to their durable materials and design, the red JONSERED grapples are the best choice for handling recycling materials of any kind.

LOGLIFT JONSERED grapples can be equipped with a lock valve. A centralised lubrication system is also available for most models.

Loglift Jonsered

X 43
X 53

The X series grapples, X 43 and X 53 are eminently suitable for mid-sized truck loaders for loading pulpwood and logs.

Loglift Jonsered

FX 26
FX 36
FX 42

The FX series is designed to withstand the demanding use of forestry machines. The FX 26 and FX 36 are suited for forestry cranes and lightweight truck loaders. The FX 42 is suited for heavy forestry machine and skidder cranes.

Loglift Jonsered

- TX 56**
- TX 56 B**
- TX 86 B**
- TX 811 B**

The heavy TX series grapples used in industrial cranes in addition to truck loaders. The TX 56 is optimised for loading raw timber using heavy truck loaders, while the reinforced TX 56 B is also suitable for use on excavators.

The heavy TX 86 B and the TX 811 B, with its wider jaws, can be installed on industrial cranes and excavators.

Loglift

RX 31

RX 51

The RX series grapples are designed for handling logging waste and refuse. The RX 31 grapple is used in forestry machine loaders, and the RX 51 is suitable for larger loaders.

Loglift

PX 20

PX 40

The PX series grapples are well suited to handling individual logs. The PX 20 is intended for industrial cranes used in timber processing lines. The PX 40 is designed for use in light skidder cranes.

For Hard Wear and Tear

Loglift Jonsered features the RC range for handling recycling materials, having been specifically designed for this in co-operation with professionals. Because handling demolition waste and scrap causes much wear and tear, the steel used in these grapples is much more wear-resistant than normal. The grapples' open tips act as effective rakes when collecting scrap.

Jonsered

RC 30
RC 50
RC 50-67

The RC series grapples are designed for handling recycling material and demolition waste, the RC 30 for medium cranes, and the RC 50 and RC 50-67 - with its denser teeth - are suitable for larger cranes.
